

Scott Logic

# Trade Lifecycle Modernisation

We manage the cloud migration of your Trade Lifecycle in incremental, affordable steps, unlocking the business agility you need to outstrip competitors in a highly dynamic marketplace.

### This solution is for you if you want to improve:

- Straight-Through Processing, risk management, and real-time position monitoring
- front-to-back integration and trade visibility
- client servicing and data-driven decision-making
- automation, reconciliation, and reporting
- resiliency and scalability

# Cloud migration made manageable

Through our cost-effective, pragmatic approach to Trade Lifecycle Modernisation, you acquire the business agility to respond to market dynamics and seize competitive advantage.

Our solution supports the incremental transition of trade lifecycle data flows from tightly coupled legacy systems into a cloud pipeline. Data that used to pass from system to system is transformed into a cloud native event stream running along the pipeline through each step of a trade. A cloud data store enables the provision of analytics across the whole trade lifecycle, offering you unparalleled insights.

## Real-time data at your fingertips

Gain the capability to connect to ultra-low-latency, cloud-hosted feeds from the exchanges, giving you the fastest access to timestamped market data.

## Tailored to your needs

In contrast to off-the-shelf solutions, our Trade Lifecycle Modernisation solution is tailored to your specific context and requirements, designed to evolve with your business, and built with interoperability and extensibility in mind.

## Respond rapidly to the market

Tightly coupled trading systems make any change a complex, slow and costly undertaking. We work with you to implement a loosely coupled cloud architecture that scales, flexes and adapts to your ever-changing needs.

## Incremental value throughout delivery

Our approach turns a daunting, monolithic challenge into an incremental roadmap of manageable steps that deliver value at each stage, whether in the form of new capabilities or through cost savings from decommissioned legacy systems.

## Outsource value-adding services easily

Share decoupled trade representations over the cloud with third-party bureau providers offering bespoke services, such as post-trade enrichment, trade reconciliation and IPV.

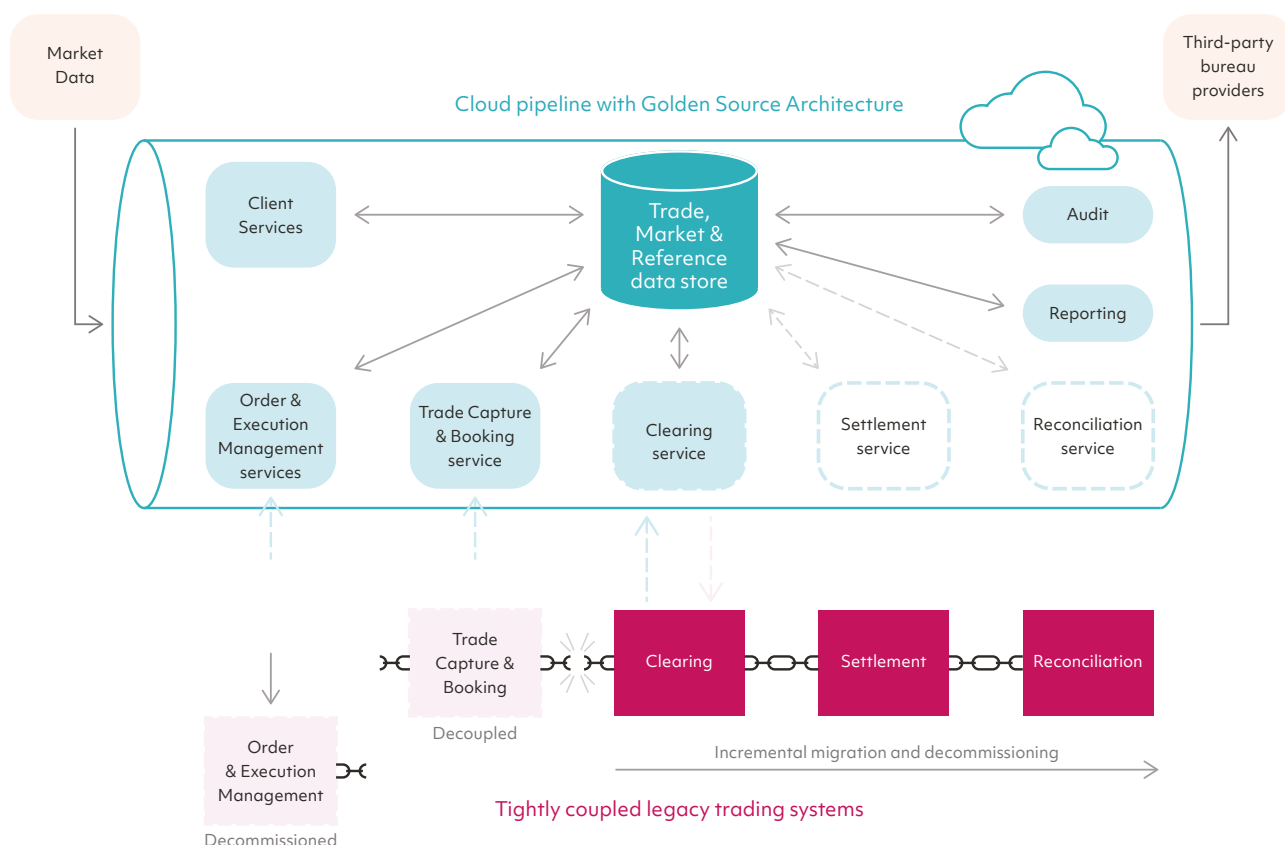

# How we manage your migration

We work with you to create a long-term, incremental roadmap that charts the full migration of the trade lifecycle to the cloud.

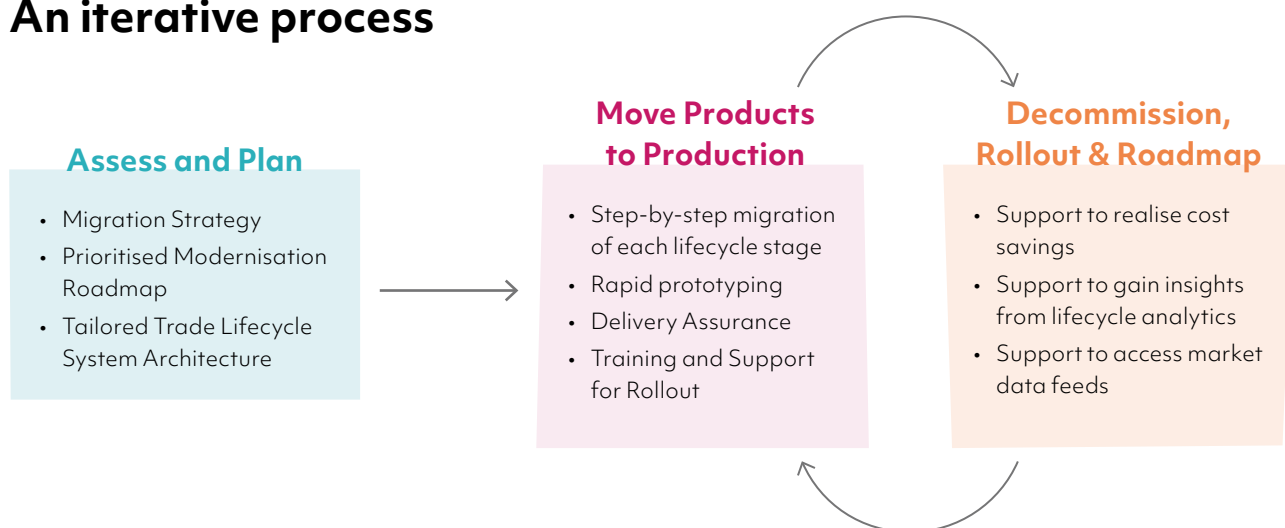

We then deliver the roadmap for you, increment by increment, migrating processes and workflows by securely connecting legacy systems to the cloud pipeline.

At each stage, we validate that a legacy system is 'speaking to' the pipeline and that the lifecycle processes are operating as expected. We then decouple the legacy system from the other trade lifecycle systems in your estate. We analyse each decoupled system to assess what value it offers you; where a system is no longer deemed to offer any value, we recommend its decommissioning.

## Illustration of our incremental approach to Trade Lifecycle Modernisation

## An iterative process

## Ready to modernise?

Let our expert engineers manage the complexities of your Trade Lifecycle Modernisation for you, unlocking new opportunities and value for your business with each step along the roadmap.

## What makes Scott Logic the right partner?

- **Financial Services in our DNA:** From developing Lehman Live in our earliest days to working with eight of the biggest investment banks over the following two decades, we have gained a deep understanding of financial services institutions, expertise in the trade lifecycle, and rich experience of working in highly regulated environments.
- **Cloud expertise:** We are cloud experts with experience of supporting financial institutions such as Saxo Bank to migrate key business processes to the cloud.
- **AWS Advanced Tier Partnership:** Our cloud expertise is validated by our partnerships with hyperscalers such as AWS, allowing us to bring to bear additional support and advantages to support your Trade Lifecycle Modernisation.
